Skill Foundry — Resource Page Redesign

Next implementation instruction for the AI coding agent

PASTE THIS INSTRUCTION INTO THE CODING AGENT

```
REDESIGN THE RESOURCE PAGE — FINAL INFORMATION ARCHITECTURE

Use the existing resource-page data and functionality. Do NOT delete or simplify existing workflow data.
This is a visual and structural redesign.

1. OVERALL VISUAL SYSTEM
Change the resource page to the black / soft-white / yellow visual language from the reference screenshots.
Use near-black for the page, slightly lighter charcoal/black for cards, soft white for primary text, muted gray-white for secondary text, and yellow only for important accents, actions, step numbers and selected highlights.
Remove the blue-heavy visual treatment from the resource page. No blue glowing connectors or blue blueprint background.
Keep it professional, minimal, readable and mobile-first.

2. REMOVE THE OLD WORKFLOW / BLUEPRINT UI
Permanently remove:
- "FOLLOW THE STEP-BY-STEP GUIDE BELOW"
- "STEP-BY-STEP WORKFLOW" capsule
- old roadmap/chart/flowchart structure
- connecting lines and nodes
- zoom/pan blueprint behavior
- old blueprint expand/reset controls
- duplicated workflow heading created only for the old blueprint
Keep the existing workflow content and order.

3. SECTION HEADINGS
Remove capsule headings from every resource section.
Use a small yellow vertical line followed by the heading:
■ Tools used
■ Inputs
The yellow line is an accent, not the title.
Do not make every heading yellow. Use white/off-white for main headings, muted white/gray for descriptions, and yellow only for small accents and important highlights.

4. RESOURCE PAGE STRUCTURE
Use a consistent vertical rhythm:
SECTION ACCENT + TITLE
Description / answer / content
Content block
Keep consistent left alignment, title size, description size, spacing, card padding and content width.

5. WORKFLOW STEP CARD
Each workflow step becomes one large vertical card.
Do NOT use a chart.
Order:
STEP NUMBER
Step title
Tool
Short description
Tool section
Inputs
Prompt
Settings, only when applicable
Step Result
The card should feel like a clean instructional article, not a dashboard.

6. STEP NUMBER
Put the step number centered directly on the top border.
Use 1, 2, 3, 4, 5 — NOT 01, 02, 03.
Use a small yellow circular marker integrated with the top border, not an oversized floating badge.
```

7. TOOL SECTION
Every step must clearly identify its tool.
Use:
■ TOOL
[TOOL LOGO] Tool Name
Category
Optional one-line purpose
Example:
[ChatGPT logo] ChatGPT
Image Generation
Create the character reference
Use the existing tool data/assets. Do not invent tools.

8. INPUTS
Multiple inputs must be represented horizontally:
■ INPUTS (3)
[Input 1] [Input 2] [Input 3] → horizontal swipe
Use fixed-width cards, approximately 220–240px wide on mobile.
Do NOT let card width change according to title length.
Use a fixed thumbnail/media frame inside every card.
Use object-fit: cover when safe; contain when cropping would damage the reference.
Horizontal scrolling is only for multiple inputs. A single input should be a normal full-width card.
Hide the ugly scrollbar and make the row touch-friendly. Scroll snapping may be used.
The card dimensions must stay consistent.

9. PROMPT SECTION
Use:
■ PROMPT
Remove the "COPYABLE PROMPT" title.
At the top-right of the prompt box place exactly two buttons:
[Download icon] [Copy]
The Download button MUST be immediately LEFT of Copy.
Copy button text must be ONLY "Copy".
Do not put an icon inside Copy.
Download button must contain ONLY the download icon.
No "Download Prompt" text.
Keep long-prompt internal scrolling.
The Download button must actually download the prompt as a PDF using the existing prompt data.

10. SETTINGS
Settings come after Prompt:
■ SETTINGS
Use compact setting cards such as:
[MODEL] [ASPECT RATIO]
[value] [value]
[DURATION] [RESOLUTION]
[value] [value]
Only show settings that actually exist. Do not invent settings or create empty grid cells.

11. STEP RESULT / OUTPUT
A workflow step normally has one output, so do NOT use a horizontal carousel for the result.
Use:
■ STEP RESULT
[large output image/video]
Result title
Short explanation
For video output use the existing video/media presentation. For image output use the existing image. Do not turn a single output into multiple small cards.

12. INPUT VS OUTPUT RULE
Multiple inputs = horizontal fixed-width cards with swipe.
Single output = one large full-width result block.
The visual story should be:
INPUTS → PROMPT → SETTINGS → RESULT

13. NESTED BOX RULE

Do not put every section inside another large bordered box.
The step card is the main container.
Inside it use spacing, small yellow vertical accents, subtle dividers where useful, and compact dark surfaces for inputs/settings/prompt.
Avoid excessive nested borders.

14. KEEP ALL EXISTING DATA
Preserve all inputs, thumbnails, titles, descriptions, full prompts, copy functionality, prompt download, applicable settings, outputs, media, tool information, category and step descriptions.
Render the correct input count dynamically. Never hard-code "Input (1)" when there are multiple inputs.
Do not simplify the existing data model.

15. CONSISTENCY
Every step should follow:
Step number
Step title
Tool
Description
Inputs
Prompt
Settings
Result
If a section does not apply, omit it. Never create empty sections.

16. MOBILE-FIRST
Test narrow mobile width.
No horizontal page overflow.
Only the input row may horizontally scroll.
Prompt text stays inside its container.
Buttons never overlap.
Long titles wrap naturally.
Images keep correct proportions.
Step cards have consistent margins.
Touch targets are comfortable.
No fixed/sticky element may cover step content.

17. DO NOT CHANGE UNRELATED PARTS
Do not redesign unrelated pages, navigation, resource data, or working media functionality unless required for this resource-page redesign.

18. LIGHT THEME
Use exactly the same structure and hierarchy in light mode. Only adapt background, card surfaces, text, borders and shadows. Keep yellow as the accent.

19. FINAL QUALITY CHECK
Test:
- Step 1 with one input
- a step with multiple inputs
- Step 4 with three inputs
- a long prompt
- a step with settings
- image output
- video output
- Copy
- prompt PDF Download
- horizontal input scrolling
- no page horizontal overflow
- dark theme
- light theme

Do not stop after changing CSS. The final result must feel like a professional educational workflow page where a visitor can understand every step immediately.

Desired step hierarchy

```
DESIRED STEP HIERARCHY

STEP NUMBER
Step title

■ TOOL
[logo] Tool Name
Category
Purpose

■ INPUTS (3)
[ Input 1 ] [ Input 2 ] [ Input 3 ] → swipe

■ PROMPT
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■
■ PROMPT [↓] [ Copy ] ■
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■
■ prompt text... ■
■ prompt text... ■
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■

■ SETTINGS
■■■■■■■■■■■■■■■■■■ ■■■■■■■■■■■■■■■■■■
■ MODEL ■ ■ RATIO ■
■ value ■ ■ value ■
■■■■■■■■■■■■■■■■■■ ■■■■■■■■■■■■■■■■■■

■ STEP RESULT
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■
■ OUTPUT IMAGE/VIDEO ■
■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■■

Result title
Short explanation
```

Locked decisions: multiple inputs scroll horizontally in fixed-size cards; a single output is one large result; each step has a dedicated tool block; settings follow the prompt; Download is immediately left of Copy; Copy says only “Copy”; and the old blueprint/chart UI is removed.
